PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years delivering and maintaining CMS-driven web platforms across production Next.js, React, TypeScript, and C#/ASP.NET Core stacks. Delivered a Next.js CMS platform with real-time content preview across multiple managed web assets at Vision Verse, and integrated GTM and GA4 tracking across a high-traffic property platform at Midland. Graduated from Deakin University with a Master of IT (June 2026); holds full working rights in Australia with no sponsorship required.

TECHNICAL SKILLS

AI Tooling & Agents: Claude Code, GitHub Copilot, Antigravity IDE, Google Gemini

Frontend: ReactJS, Next.js, TypeScript, HTML5/CSS3, Bootstrap, Tailwind CSS, styled-components

Backend: Node.js, Express, Nest.js, C#, ASP.NET Core, .NET, RESTful API, GraphQL, MVC Architecture, Middleware Design

DevOps & CI/CD: Azure DevOps, Azure, Docker, GitHub Actions, Jenkins, GCP, Terraform

Tools: Git, Visual Studio, Google Tag Manager (GTM), GA4, Jira, Confluence, Agile

PROFESSIONAL EXPERIENCE

Full Stack Developer | [Vision Verse](#) · Melbourne, VIC | 18/11/2024 – 03/03/2025

- Delivered a CMS platform in Next.js/TypeScript with real-time side-by-side content preview and component-driven page architecture, cutting content-creation time by 40% across all managed web assets; deployed via CI/CD-integrated pipelines with AI coding tools (ChatGPT, GitHub Copilot), reviewing all output against team quality standards before merge
- Shipped 3 gamification features (slot machine, gacha, lucky draw) in React.js/TypeScript within Agile sprints to enhance user engagement across managed web properties, tracking campaign analytics across 500+ active sessions

Software Engineer | [MIDLAND HKP SERVICES](#) · Hong Kong | 25/09/2023 – 13/06/2024

- Integrated Google Tag Manager (GTM) across all user-facing web components on the property platform, tagging search and listing interactions to deliver behavioural analytics for marketing campaign decision-making, directly supporting the tracking and analytical tools integration layer
- Migrated a legacy PHP monolith to a Next.js web platform with zero service interruption, decomposing the architecture into 3 independent services to improve availability, directly analogous to CMS platform migration and multi-asset web infrastructure ownership
- Architected a real estate web platform (React, TypeScript, Node.js/Express, MongoDB) supporting 44,000+ property listings with third-party API integration and Elasticsearch-powered search across multiple web assets; structured server-side code using MVC patterns and composed Express middleware chains for authentication, logging, and error handling
- Reduced average API response time by 70% under peak load by implementing in-memory hash table caching for O(1) query lookup, maintaining platform performance across all managed web properties
- Enforced pull request review standards and code quality gates across the engineering team, ensuring every merge to the web platform met production-grade quality criteria

Full Stack Developer | [Pismo Labs](#) · Hong Kong | 17/01/2022 – 29/04/2023

- Owned the full web development lifecycle across production Next.js/TypeScript ecommerce web properties serving 10,000+ monthly active users, from feature scoping through Agile sprints to production deployment and BAU support
- Built and maintained RESTful product catalogue and order APIs in Java and Spring Boot, consumed by React frontend components; documented API contracts enabling consistent integration across cross-functional squads
- Eliminated a class of production runtime errors by leading JavaScript-to-TypeScript modernisation across 4 core services applying SOLID principles, reducing runtime errors by 30%
- Reduced redundant API calls by 60% by resolving over-fetching across web pages, implementing Next.js ISR with revalidation and server-side caching to keep content fresh without degrading performance
- Prevented production regressions by writing Jest unit tests and Playwright E2E tests across all critical web flows, integrated into CI to catch issues before merge

PROJECTS

BeanWorks — Full Stack E-Commerce Platform | C#, ASP.NET Core, .NET 10, React 19, TypeScript, PostgreSQL, Docker · Personal Project

- Built entirely with an agentic Claude Code workflow as the primary development driver, every feature across the full stack implemented via Claude Code with mandatory human code review on all generated output, shipping a production-grade codebase at high velocity
- Built a full-stack e-commerce platform: C#/ASP.NET Core (.NET 10) REST API with 25+ JWT-protected endpoints (auth, catalogue, orders, Stripe payments) + React 19/TypeScript SPA with Zustand, TanStack Query, and React Hook Form + Zod across 10+ pages
- Implemented EF Core TPT inheritance for a polymorphic product schema, event-driven order workflows via MassTransit (RabbitMQ / in-memory fallback), containerised with Docker, and deployed backend to Fly.io and frontend to Vercel; documented with Swagger/OpenAPI 3.0 and Scalar
- Designed a reusable component library with CVA and 31 Storybook stories; achieved 87 xUnit integration tests (WebApplicationFactory) on the API and 46 Playwright E2E tests on the SPA covering all critical user flows

ShotIQ — Basketball Shot Analyzer | Next.js, TypeScript, Python, FastAPI, Google MediaPipe, PostgreSQL, Docker · Personal Project

- Built with Claude Code as the primary development driver across both the Next.js frontend and FastAPI backend, with mandatory human code review on every generated output; delivered a Next.js 15/TypeScript frontend with App Router route groups, server/client component separation, Recharts score-history line chart and mechanics radar chart, and Radix UI primitives; integrated an Axios instance with JWT interceptor and a polling loop with useRef-based interval cleanup on unmount to deliver real-time analysis status updates
- Engineered a computer vision pipeline using Google MediaPipe Pose to extract 33 skeletal landmarks per frame and compute shooting mechanics (release angle, elbow extension, knee bend, shoulder alignment); implemented a custom release-frame detection algorithm combining wrist-height geometry and elbow-extension scoring with a binary visibility gate to prevent post-landing false positives; backed by an async FastAPI (Python 3.12) REST API with SQLAlchemy/PostgreSQL persistence, JWT authentication, and asyncio semaphore (max 2 concurrent CV jobs) to prevent CPU saturation
- Shipped client-side 3-second video trimming entirely in-browser via FFmpeg.wasm before upload, reducing server ingestion payload; containerised full stack with Docker Compose and deployed a static demo to GitHub Pages via GitHub Actions

EDUCATION

Master of IT (Software And Services Development) | [Deakin University](#) | 07/2024 – 06/2026

WAM: 83/100

- Capstone Project Team Leader: Led 40-person React Native (iOS/Android) project delivering a security guard workforce app (shift management, check-in, patrol tracking); built core navigation and TypeScript API integration layer across 3 sub-teams
- Capstone Architecture: Designed and maintained CI/CD pipeline enabling independent feature releases across 3 sub-teams with zero production rollbacks
- Java & Android Development: Built an Android native application in Java with a Spring Boot REST API backend; wrote JUnit unit tests covering core service layer business logic using the Spring Boot test context
- Python & Machine Learning: Built a Django REST API backend for a conversational chatbot application, integrating Hugging Face LLM APIs for natural language inference; used NumPy, Pandas, and scikit-learn for data preprocessing and feature pipelines, and TensorFlow for model experimentation
- GCP & Infrastructure as Code: Deployed microservices on Google Cloud Platform using Terraform, provisioning cloud resources and managing infrastructure as code across development and staging environments
- SEBE Peer Mentor Program: Peer Mentor in Trimester 2, 2025

BEng in Industrial Engineering | [The Hong Kong University of Science and Technology \(HKUST\)](#) | 2017 – 2020

- Dean's List
